

Activiteiten Prof. Dr. E. Middelkoop

De focus van de onderzoeksactiviteiten van Speerpunt ‘Huidregeneratie en Wondgenezing’ ligt op het verder ontwikkelen en klinisch toepassen van ‘Huidvervangende materialen’, met speciale aandacht voor het toepassen van autologe cellen in deze materialen.

Hiertoe wordt gewerkt aan de volgende projecten:

1. Skin Tissue Engineering and Regenerative Medicine: From skin repair to regeneration (SkinTERM)
Horizon2020 955722, Marie Curie project, waarin nieuwe biomaterialen voor huidregeneratie worden ontwikkeld en wordt onderzocht hoe zo goed mogelijk foetale regeneratie kan worden bereikt.
2. Application of hair follicles/hair follicle stem cells for skin constructs (HARESCON)
Health-Holland- NBS project number: 21.01: dit project richt zich op de ontwikkelen van haarfollikels en zweetklieren in huidconstructen. Deze technieken worden in het laboratorium onderzocht.
3. Development and implementation of a tissue-engineered autologous skin construct
22.110, funding door stichting Reggeborgh via de Nederlandse Brandwonden Stichting. Doel van dit project is gekweekte huidsubstituten te ontwikkelen voor klinische toepassing, met behoud van pigmentcellen en een zo kort mogelijke kweektijd. Dit project is gestart in 2023 en heeft een looptijd van 5 jaar.
4. Study with an autologous dermo-epidermal skin substitute for the treatment of full-thickness skin defects in adults and children (DenovoSkin)
EHSG Clinical Trials: 2006344 / 279024 (Sponsor: Cutiss AG, Zurich, Zwitserland)
Klinische toepassing van gekweekte autologe huid bij patienten met brandwonden en reconstructies na brandwonden of trauma. In dit fase 2 onderzoek is gekweekte huid toegepast in AUMC en RKZ. Momenteel worden nog follow up metingen uitgevoerd, en wordt een fase 3 studie voorbereid. Verwachting is dat deze in 2024 van start zal gaan.

Activiteiten Prof. P.P.M. van Zijlen

Eén van de speerpunten van het onderzoek van Prof. Van Zuijlen is het gebruik van mathematic modeling om klinische uitkomstmaten te kunnen gaan voorspellen. Real-world data worden hier toe uit de klinische praktijk en uit diverse eerder uitgevoerde onderzoeken samengebracht en in mathematische complexe modellen ingevoerd.

Daarnaast is een belangrijk onderzoeksprogramma gericht op waarde-gedreven zorg, waarin zorg, opleiding en onderzoek worden gecombineerd.

Binnen deze programma's wordt gewerkt aan de volgende projecten:

1. Unravelling the inflammatory response and the influence of Alkaline Phosphatase in severe burn patients by mathematical modelling
Health-Holland: LSHM18069, NBS: 18.01
2. Optimizing the skin grafting procedure: micrografts versus meshed skin grafts (MEEK-MESH)
FWO T000319N
3. The Necrotizing Soft Tissue Infections Knowledge project, Phase 2 NBS: 22.111
4. The missing link in burn wound care; from bench to bedside and back NBS: 22.112
5. Modeling and prediction of burn injuries: an interdisciplinary research approach (COMBI)
Health-Holland- NBS project number: 22.113
6. National Specialised Burn Care, Education & Research ZonMw 10070022010003

Part 1 Optimizing person-centred acute burn care through shared decision making to meet patient's preferences and goals
 Part 2 Optimizing burn care by person-centred treatment strategies for tissue engineered skin constructs; applying shared decision making to meet patient's goals and preferences
 Part 3 Optimizing aftercare for burn survivors through a blended person-centred aftercare program, directed at patients' self-management
 Overarching project "Development of Value Based Healthcare & Cost-effectiveness"
